***Allowable Subject Matter***

The previous objections and rejections are hereby withdrawn in view of the amendments filed 6/14/07. The new limitations for using a previously unknown correlation (i.e. between markers and a disorder or disease) to devise a measurement protocol is supported by the originally filed specification on page 7. The prior art of BARNHILL and US 6,484,104 teaches use of known correlations between markers and disorders to diagnose a disorder. There are many and various methods known in the prior art for correlating markers with disorders; however, the prior art does not teach or fairly suggest use of a combination of raw point of care data, previously used for diagnosis, and follow-up diagnostic data to identify a previously unknown correlation between at least one marker and a medical condition other than that previously diagnosed, wherein the at least one marker is not one known to have a correlation with the diagnosed medical condition.

***Conclusion***

Claims 2-8, 10-18 are allowed.
